

Land Development

DMK offers complete land development services ranging from residential subdivisions to full-scale world-class destination resorts. Land development has been a cornerstone of DMK for more than 25 years, giving the firm the depth of experience and level of expertise needed to approach and form solutions to any land development challenge. These services include master planning, site grading and drainage, coastal construction, utilities, stormwater management, water supply, sewage disposal, construction management and inspection services.

DMK's staff is well qualified to determine the realistic development opportunities and constraints for each project, and prepare a "sustainable" site plan based on proven engineering and design principles. We are able to offer clients the stability of a firm that has developed strong ties with the communities in which we serve. Our depth of resources allows us to meet the challenges and specific needs of each project.
