

Surface Water Management

DMK Associates is a leader in the field of water management engineering and provides a full range of professional services from analysis and concept through design and construction support services. DMK has proven experience in developing practical and cost-effective solutions to meet water management design challenges through the use of innovative and creative ideas.

DMK engineers develop cost-effective plans to protect surface water resources through innovative flood control solutions. DMK engineers and regulatory experts conduct comprehensive evaluations of watersheds, including National Pollutant Discharge Elimination System (NPDES) compliance (Municipal, Industrial and Construction), identification of pollution sources, incorporation of Best Management Practices (BMPs), ecosystem preservation, and flood hazard protection.

Services include:

- Hydraulic and Hydrologic Modeling
- Surface Water Management Reports
- Flood Plain Modeling
- Basin Studies
- Site Specific Drainage Improvements
- FEMA Grants
- Permitting
- Groundwater Modeling
- Best Management Practices
- Waterway Maintenance

Engineering Possibilities
